

POCKETMON

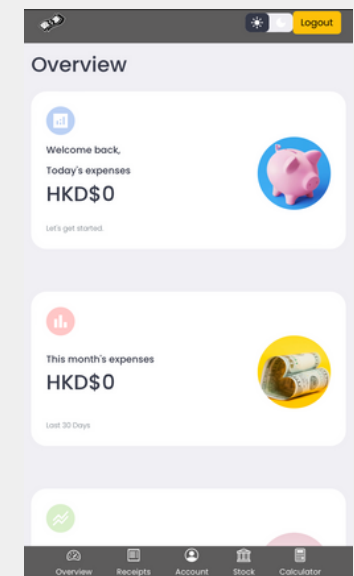

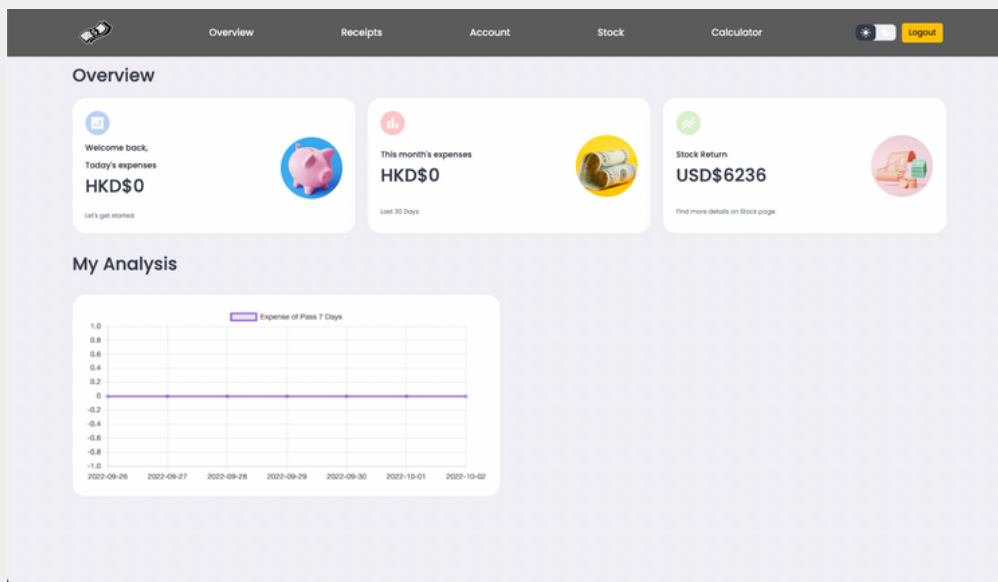

Introduction

<https://github.com/SamOr1014/Pocketmon>

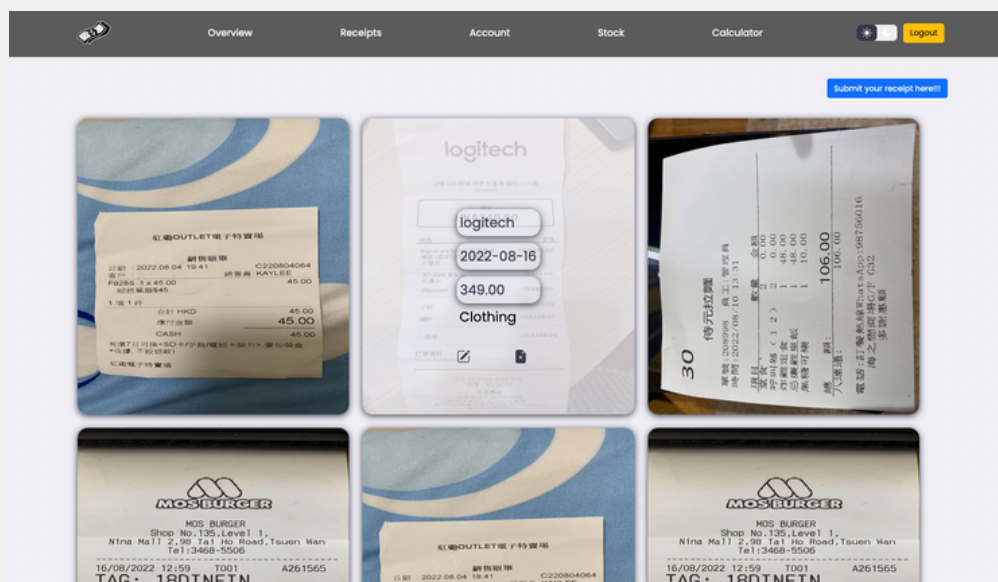

This is a website build by plain HTML, CSS and JavaScript which is aimed to allow users to record their spending by uploading their receipt. An OCR AI will read the price, venue and the date of the receipt and record it in the database as the user's expenses. A dashboard will show the analytics of the current month spending and trend of their spending.

Main Functions

Dashboard that can show analytics of spendings

Allows users to upload receipt to our OCR AI and record their spending

Tech Stack

Front-end

Chart.js

Compressor.js

Back-end

express

PostgreSQL
